

Enter the world of generative videos

“ The momentum of AI in storytelling is accelerating, both in economic impact and creative adoption. ”
AI in filmmaking alone is expected to be a multi-billion-dollar industry as production houses invest in automation, VFX, and generative tools. ”

AI tools are already helping generate story ideas, dialogue, and plot outlines. In the future, AI could collaborate with writers to co-write scenes or even whole scripts. AI image generators are helping directors visualize characters, sets, and scenes before a single frame is shot.

Videosagent.ai will change the media and entertainment landscape

“ With AI, movies can be made to adapt to the viewer’s mood, preferences, and even choices. ”

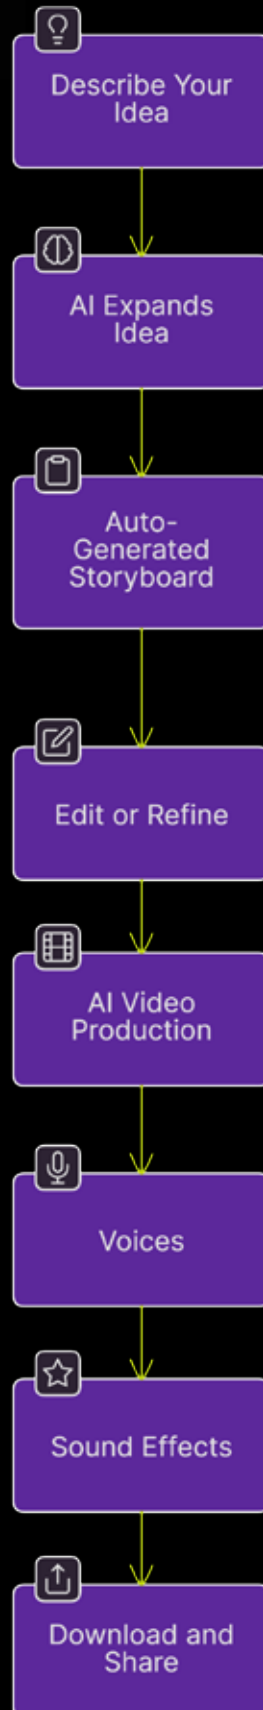

Sharad Agarwal,
Founder – Cyber Gear

AI-generated actors and digital twins will soon be the new norm. Replicating actor voices or creating entirely synthetic ones is already happening. AI speeds up VFX creation, like realistic face swaps, background generation, or scene clean-up. You can now create customized storylines and watch fully AI-generated videos entirely written, directed, and performed by AI.

The future of AI Movie Making

Within the next 5–10 years, expect hybrid productions where AI and humans co-create at every stage.

In the next decade, we could see an AI film win an Oscar!
